

Gemini Enterprise: Manage Release Note

Version 2.5.1

Welcome to Manage 2.5.1

This document provides the release notes for Manage v2.5.1. It describes notable changes compared to previous production release.

Upgrade from previous versions

Manage 2.5.1 is released as an incremental system upgrade pack which contains all changes since the Manage 2.4 release.

Confirm your current Manage version before applying this upgrade pack. An existing installation of Manage 2.4 and above is required for this upgrade pack.

Changes in 2.5.1

- Fix multiple security vulnerabilities found and validated before Aug. 17, 2018.
- JAVA Runtime Environment has been updated.

Fixed Issues

- MGR-2460: Rsync will be disabled after upgrade.
- MGR-2466: Internal error happened on Bulk Provisioning.
- MGR-2511: Unable to add sites in environment when adding nodes or clusters.
- MGR-2527: Apps in Integration Center disappeared when upgrading from Manage 2.3.x.
